

Reducing serious injuries within trampoline parks

25-27 November 2019

Professor David Eager, UTS

Dr Lisa Sharwood, USyd

Dr Ruth Barker, QISU

Dr Susan Adams, Sydney Children's Hospital & UNSW

Facts

Trampoline parks are popular around the world and are an increasing source of preventable debilitating injuries

There are six known trampoline park fatalities

There are also positive benefits from trampoline parks such as rigorous exercise, balance, coordination pumping toxins within the lymphatic system etc.

Australia Standard AS 5159.1:2018 Trampoline Park Facilities Part 1: General safety requirements and test methods, 22 October 2018

Australia Standard AS 5159.2:20xx Trampoline Park Facilities Part 2: Dismount pits - Design and test methods – Awaits funding support for research to be undertaken to establish potential forces and bending moments on a user's neck

Facts

There is a project to write and publish a CEN ISO Standard

The CEN ISO Committee has met 6 times

Options for Australia include:

1. Banning dismount pits and air bags within trampoline parks
2. Adopting the CEN ISO Standard and withdraw AS 5159.1
3. Obtaining research funding and conducting experiments and modelling on neck bending

Thank You

Professor David Eager, UTS

Dr Lisa Sharwood, USyd

Dr Ruth Barker, QISU
